

METHODS IN MOLECULAR BIOLOGY

Series Editor

John M. Walker

School of Life and Medical Sciences

University of Hertfordshire

Hatfield, Hertfordshire, UK

For further volumes:
<http://www.springer.com/series/7651>

For over 35 years, biological scientists have come to rely on the research protocols and methodologies in the critically acclaimed *Methods in Molecular Biology* series. The series was the first to introduce the step-by-step protocols approach that has become the standard in all biomedical protocol publishing. Each protocol is provided in readily-reproducible step-by-step fashion, opening with an introductory overview, a list of the materials and reagents needed to complete the experiment, and followed by a detailed procedure that is supported with a helpful notes section offering tips and tricks of the trade as well as troubleshooting advice. These hallmark features were introduced by series editor Dr. John Walker and constitute the key ingredient in each and every volume of the *Methods in Molecular Biology* series. Tested and trusted, comprehensive and reliable, all protocols from the series are indexed in PubMed.

Quantum Dots

Applications in Biology

Third Edition

Preface

Light plays an important role in life comprehension, allowing for extracting important biological information from single molecules to whole organisms. Among the light-based tools, quantum dots (QDs) have arisen as versatile fluorescent nanoprobes due to their unique optical properties. QDs are highly efficient photostable multifunctional platforms with chemically active surfaces enabling conjugation with molecules, other nanostructures, and surfaces and being an interesting tool to follow long-term biological processes.

When first reported in literature, this class of nanomaterials was not expected to be so useful for biological purposes. Nevertheless, since the end of the 1990s, QDs have been increasingly applied as fluorescent probes in life sciences for quantitative and qualitative labeling of cells, tissues, and small animals, literally shedding light, and unraveling many biological processes. Additionally, over these years, studies in bioanalytical and biosensing fields, which exploit both optical and semiconductor properties of QDs, have also aroused remarkable interest. Moreover, novel conjugation procedures and methods for evaluating these processes have been proposed. More recently, the blinking property of QDs began to be explored in super-resolution microscopy.

In this context, approximately 5 years from the second edition, the third edition of the book *Quantum Dots: Applications in Biology* brings 19 chapters addressing consolidated approaches as well as new trends in the field. The book is organized in four parts; the first part comprises two tutorials, one describing a multivariate approach to optimize the desired QD property and another evaluating the quantum yield of QDs. The second part covers some important features about preparative processes and characterizations of QDs for their successful use as fluorophores. The third part presents methods related to QDs for live cell applications. Finally, the last part demonstrates the versatility of QDs in the bioanalytical and biosensing field. The editors hope that the book can be a useful reference material for people who already work with QDs, providing information about methods and protocols from the basics to the applied science.

Contents

| | |
|--------------------|----|
| Preface | v |
| Contributors | ix |

PART I TUTORIALS

| | |
|--|----|
| 1 Multivariate Optimization: A Powerful Tool for the Systematic Control of Quantum Dots Properties | 3 |
| <i>Isabelle Moraes Amorim Viegas, Giovannia Araujo de Lima Pereira, and Claudete Fernandes Pereira</i> | |
| 2 Absolute and Relative Methods for Fluorescence Quantum Yield Evaluation of Quantum Dots | 37 |
| <i>Renato E. de Araujo and Christian T. Dominguez</i> | |

PART II PREPARATIVE, PROCESSES, AND CHARACTERIZATIONS

| | |
|--|-----|
| 3 Preparation and Analysis of Quantum Dots: Applications of Capillary Electrophoresis | 55 |
| <i>Karel Klepářník and Pavlína Modlitbová</i> | |
| 4 Measuring the Hydrodynamic Radius of Colloidal Quantum Dots by Fluorescence Correlation Spectroscopy | 85 |
| <i>Diogo B. Almeida and André A. de Thomaz</i> | |
| 5 Encapsulating Quantum Dots in Lipid–PEG Micelles and Subsequent Copper-Free Click Chemistry Bioconjugation | 95 |
| <i>Alexander M. Saeboe, Joshua C. Kays, and Allison M. Dennis</i> | |
| 6 Quantitative Analysis of Single Quantum Dot Trajectories | 109 |
| <i>Oleg Kovtun, Lucas B. Thal, Travis Josephs, and Sandra J. Rosenthal</i> | |
| 7 Phase Transfer and DNA Functionalization of Quantum Dots Using an Easy-to-Prepare, Low-Cost Zwitterionic Polymer | 125 |
| <i>Margaret Chern, Chloe Grazon, and Allison M. Dennis</i> | |

PART III CELL APPLICATIONS

| | |
|--|-----|
| 8 Dextran-Functionalized Quantum Dot Immunoconjugates for Cellular Imaging | 143 |
| <i>Kelly Rees, Melissa Massey, Michael V. Tran, and W. Russ Algar</i> | |
| 9 Labeling Neuronal Proteins with Quantum Dots for Single-Molecule Imaging | 169 |
| <i>Lucas B. Thal, Oleg Kovtun, and Sandra J. Rosenthal</i> | |

| | | |
|----------------------------|---|-----|
| 10 | Quantitative Chemical Delivery of Quantum Dots into the Cytosol of Cells | 179 |
| | <i>Joseph L. Watson, Alessandra Stangherlin, and Emmanuel Derivery</i> | |
| 11 | Stimulus-Sensitive Theranostic Delivery Systems Based on Microcapsules Encoded with Quantum Dots and Magnetic Nanoparticles | 199 |
| | <i>Galina Nifontova, Fernanda Ramos-Gomes, Frauke Alves, Igor Nabiev, and Alyona Sukhanova</i> | |
| 12 | Resazurin-Based Assay to Evaluate Cell Viability After Quantum Dot Interaction | 213 |
| | <i>Maria Isabela A. Pereira, Camila Aparecida P. Monteiro, Wesley Felix de Oliveira, Beate S. Santos, Adriana Fontes, and Paulo E. Cabral Filho</i> | |
| PART IV BIOANALYSIS | | |
| 13 | Multiplexed Detection of Cancer Serum Antigens with a Quantum Dot-Based Lab-on-Bead System | 225 |
| | <i>Tatiana Tsyz, Alexander Karaulov, Igor Nabiev, and Alyona Sukhanova</i> | |
| 14 | CdS Quantum Dots Modified Photoelectrochemical Biosensor for TATA-Binding Protein Probing | 237 |
| | <i>Yi-Fan Ruan, Xiao-Mei Shi, Hai-Yan Wang, Wei-Wei Zhao, Jing-Juan Xu, and Hong-Yuan Chen</i> | |
| 15 | Quantum Dots-Based Lateral Flow Test Strip for Glutathione Detection | 249 |
| | <i>Zhaohui Li, Juanzu Liu, Lin Zhang, and Jianjun Li</i> | |
| 16 | Comparative Advantages and Limitations of Quantum Dots in Protein Array Applications | 259 |
| | <i>Nizar Ayadi, Florian Lafont, Cathy Charlier, Houda Benhelli-Mokrani, Pavel Sokolov, Alyona Sukhanova, Fabrice Fleury, and Igor Nabiev</i> | |
| 17 | Development of Optical Sensors Based on Quantum Dots Using Molecularly Imprinted Polymers for Determination of Prilocaine | 275 |
| | <i>Nafiseh Kazemifard, Ali A. Ensafi, and Zeinab Saberi</i> | |
| 18 | Detection of Tetanus Antibody Applying a Cu-Zn-In-S/ZnS Quantum Dot-Based Lateral Flow Immunoassay | 285 |
| | <i>Hong-Min Meng, Juan Chen, Lingbo Qu, and Zhaohui Li</i> | |
| 19 | Quantum Dots for Assessment of Reactive Oxygen Species Accumulation During Chemotherapy and Radiotherapy | 293 |
| | <i>Kimal Honour Djam, Bong Han Lee, Sindhuja Suresh, and Andrew Edet Ekpenyong</i> | |
| <i>Index</i> | | 305 |
