Preface

If you want to find the secrets of the universe, think in terms of energy, frequency and vibration. Nikola Tesla

Energy is a major challenge for humans in the context of climate change and increasing population. In particular, global warming is partly due to CO₂ emissions from the excessive use of fossil fuels such as oil, coal and gas. Research has thus recently focused on sustainable biofuels and energy storage. In particular, nanomaterials and metal oxides are enhancing the efficiency of batteries, supercapacitors, fuel cells and electronics. For instance, optoelectronic devices consume much less power than classical devices. Materials for rechargeable batteries are presented in Chap. 1 by Balaji Sambandam et al., with emphasis on electrochemical properties of metal oxide-based electrode materials for energy storage. In Chap. 2, Akhila Das et al. review molybdenum disulphide supercapacitors and high performance electrodes. Chapter 3 by Ryan D. Corpuz et al. highlights the development of manganese oxide as cathode material in rechargeable zinc ion batteries (Figure). Shanmuga Sundar et al. review conductive oxides in the fabrication and application of flexible electronic devices in Chap. 4. Chapter 5 by Ramarajan et al. summarizes major findings on SnO₂ doped with Sb and Sb-Ba, Nb and Ta using spray pyrolysis.

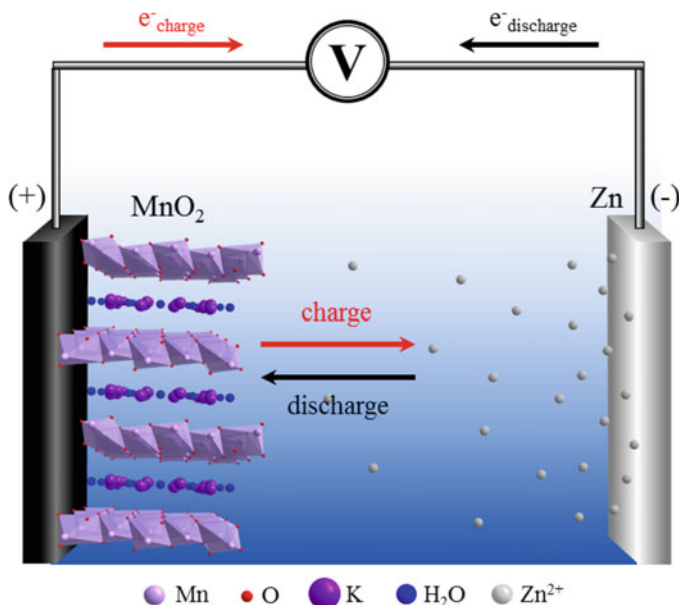

Figure. MnO_2 -based zinc ion battery, from Chap. 3. A typical MnO_2 -zinc ion battery consists of a Zn anode and MnO_2 cathode. A layered or tunnel structure MnO_2 as cathode is used together with an aqueous electrolyte such as ZnSO_4 solution

Advances in optical communication are discussed in Chap. 6 by Samuel Paul David et al., who review metal oxide semiconductors and optoelectronic applications such as light emitting diodes, solar cells, photodetectors, gas sensors and heat mirrors. Energy applications of zinc oxide in biomedicine, energy conversion and electrochemical sensing are presented by Barbosa et al. in Chap. 7. Chapter 8 by Dutta reviews metal oxides and sulfides-based gas sensors. In Chap. 9, Chintagunta et al. explain the role of metallic nanomaterials for algal biofuel production. Chapter 10 by Khan et al. discusses the fabrication of humidity sensors based on nanostructured Al_2O_3 using the thin-film sol-gel method. Muneeswaran et al. present in Chap. 11 the multiferroic properties of rare earth doped BiFeO_3 and their spintronic applications.

The main credit for this book goes to the contributing authors. We thank them very much for their high quality chapters.

Acknowledgements

We would like to first and foremost thank God to show blessings on us by involving in this book work with good health and coming out of a successful task

Our deep sense of gratitude and heartfelt thanks goes to the series editors. We sincerely express gratitude to Springer for accepting this book as part of the series Environmental Chemistry for a Sustainable World. We also extended our thanks to contributing authors and reviewers for their valuable involvement throughout this book. We express our heartfelt gratitude to researchers and publisher for permitting us to use their figures and tables. Even though every effort has been made to obtain copyright permissions from respective owners to include citation for reproduced materials, we would like to offer our apologies to any copyright holder if unknowingly their right is being infringed.

Saravanan Rajendran is thankful to the financial support from the SERC (CONICYT/FONDAP/15110019), FONDECYT, Government of Chile (Project No.: 11170414), and Faculty of Engineering, Department of Mechanical Engineering, Universidad de Tarapacá, Arica, Chile. He also extends gratitude to Prof. Lorena Cornejo Ponce (Universidad de Tarapacá) and Prof. Rodrigo Palma (Director, SERC) for their constant support and encouragement which helped complete this book.

Jiaqian Qin would like to acknowledge the support from Thailand Research Fund (RSA6080017), the Energy Conservation Promotion Fund and the Energy Policy and Planning Office, Ministry of Energy, Thailand.

F. Gracia gratefully acknowledges the financial support from the Conicyt-Fondecyt (Proj. 1171193) and MINECON-Chile through project Millennium Nucleus MULTIMAT – ICM/MINECON.

Contents

1	Metal Oxides for Rechargeable Batteries Energy Applications	1
	Balaji Sambandam, Samuel Paul David, Tamilselvan Sakthivel, Anandhi Sivaramalingam, Ananthakumar Soosaimanickam, and Jaekook Kim	
2	Molybdenum Disulfide (MoS₂) and Its Nanocomposites as High-Performance Electrode Material for Supercapacitors	59
	Akhila Das, Asha Paul, Nikhil Medhavi, Neethu T. M. Balakrishnan, M. A. Krishnan, Jou-Hyeon Ahn, Jabeen Fatima M. J., and Raghavan Prasanth	
3	Manganese Dioxide (MnO₂): A High-Performance Energy Material for Electrochemical Energy Storage Applications	91
	Ryan D. Corpuz, Lyn Marie De Juan-Corpuz, and Soorathep Kheawhom	
4	Conductive Oxides Role in Flexible Electronic Device Applications	121
	Shanmuga Sundar Dhanabalan, Arun Thirumurugan, Muniyandi Muneeswaran, Sitharthan R, Karthikeyan Madurakavi, Sivanantha Raja Avanimathan, and Marcos Flores Carrasco	
5	Indium-Free Alternative Transparent Conducting Electrodes: An Overview and Recent Developments	149
	R. Ramarajan, D. Paul Joseph, K. Thangaraju, and M. Kovendhan	
6	Thin Film Metal Oxides for Displays and Other Optoelectronic Applications	185
	Samuel Paul David, Ananthakumar Soosaimanickam, Tamilselvan Sakthivel, Balaji Sambandam, and Anandhi Sivaramalingam	

7	Zinc Oxide as a Multifunctional Material: From Biomedical Applications to Energy Conversion and Electrochemical Sensing	251
	Helliomar Pereira Barbosa, Diele Aparecida Gouveia Araújo, Lauro Antonio Pradela-Filho, Regina Massako Takeuchi, Renata Galvão de Lima, Jefferson Luis Ferrari, Márcio Sousa Góes, and André Luiz dos Santos	
8	Metal Oxide- and Sulfide-Based Gas Sensors: Recent Trends and Development	307
	Kingshuk Dutta	
9	Contribution of Metallic Nanomaterials in Algal Biofuel Production	331
	Anjani Devi Chintagunta, Ashutosh Kumar, S. P. Jeevan Kumar, and Madan L. Verma	
10	Fabrication of Nanostructured Metal Oxide Thin Film Capacitive Humidity Sensor	355
	Anwar Ulla Khan, Lokesh Kumar, Tarikul Islam, and Mohammad Ehtisham Khan	
11	Multiferroic Properties of Rare Earth-Doped BiFeO₃ and Their Spintronic Applications	375
	Muniyandi Muneeswaran, Mayakrishnan Gopiraman, Shanmuga Sundar Dhanabalan, N. V. Giridharan, and Ali Akbari-Fakhrabadi	
	Index	397

About the Editors

Saravanan Rajendran received his PhD in Physics – Material Science in 2013 from the Department of Nuclear Physics, University of Madras, and Chennai, India. He was awarded the University Research Fellowship (URF) during the years 2009–2011 by the University of Madras. After working as an Assistant Professor at Dhanalakshmi College of Engineering, Chennai, India, from 2013 to 2014, he was awarded SERC and CONICYT-FONDECYT postdoctoral fellowship by the University of Chile, Santiago, Chile, in 2014–2017. He has worked (2017–2018) in the research group of Professor John Irvine, School of Chemistry, University of St Andrews, UK, as a Postdoctoral Research Fellow within the framework of a EPSRC-Global Challenges Research Fund for the removal of Blue-Green Algae and their toxins. Currently, he is currently working as a Research Scientist in the Faculty of Engineering, Department of Mechanical Engineering, University of Tarapacá, Arica, Chile, and also as Research Associate in SERC, University of Chile, Santiago, Chile. He is Associate Editor of *International Journal of Environmental Science and Technology* (Springer). His research interests focus in the area of nanostructured functional materials, photophysics, surface chemistry and nanocatalysts for renewable energy and waste water purification. He has published in 60+ (5600+ citation and h index 30) international peer-reviewed journals and 13+ book chapters and edited 8 books for renowned international publishers.

Jiaqian Qin is presently working as a Researcher in the Metallurgy and Materials Science Research Institute, Chulalongkorn University, Thailand. He obtained his PhD Degree in Physics from Sichuan University, China, in 2010. After graduation, he was awarded JSPS Postdoctoral Fellowship at Ehime University, Japan, in the years 2010–2012. His current research interest focuses on the development of advanced nanostructured materials for energy storage and conversion applications like batteries, supercapacitors and nanocatalysts. He holds several Chinese patents, over 90 publications in the international journals of repute. He is the Editor/Editorial Member of several reputed journals like *Scientific Report* (Nature), *Current Smart Materials* and *Journal of Metals, Materials and Minerals* (JMMM).

Francisco Gracia received a PhD in Chemical Engineering from the University of Notre Dame, USA. He is currently Associate Professor in the ChEBM Department, Universidad de Chile, and Deputy Director at the Multifunctional Materials Millennium Nucleus (MultiMat). His research interests are in the area of heterogeneous catalysis, nanostructured functional materials, gas–solid interphase reactivity with emphasis on CO₂ activation and utilization, H₂ generation, photocatalysis and energy-related applications. He is a co-author of 50+ research publications and a book chapter and edited a book on subjects related to nanotechnology, photocatalysis and environmental catalysis.

Eric Lichtfouse (PhD), born in 1960, is an Environmental Chemist working at the University of Aix-Marseille, France. He has invented carbon-13 dating, a method allowing to measure the relative age and turnover of molecular organic compounds occurring in different temporal pools of any complex media. He teaches scientific writing and communication and has published the book *Scientific Writing for Impact Factors*, which includes a new tool – the Micro-Article – to identify the novelty of research results. He is founder and chief editor of scientific journals and series in environmental chemistry and agriculture. He was awarded the Analytical Chemistry Prize by the French Chemical Society, the Grand Prize of the Universities of Nancy and Metz, and a Journal Citation Award by the Essential Indicators.
