Preface

The peaceful use of space flight systems for research and technological developments in the context of promoting European and international cooperation represents the essential motivation for the programmes of the European Space Agency (ESA). One of ESA's programmes is dedicated to microgravity research, which is now an established discipline in Europe, with a dedicated group of scientists participating. The Challenger disaster has resulted in a serious discontinuity of flight opportunities in the next few years but the forthcoming International Space Station, new launchers and reentry vehicles are expected to provide ample opportunities for microgravity research in the long term. Meanwhile parabolic aircraft flights, sounding rockets as well as the delayed Shuttle-dependent missions, Spacelab D-2, the IML-missions and EURECA I, will be employed to keep microgravity experimenters reasonably busy in the interim period.

To prepare the ground for these activities, both regarding research and experiment facilities, an in-depth analysis of the state of the art is an essential requirement at this time. Such an analysis is presented in this volume. It addresses all of the topics that have been identified to be of relevance. Besides a presentation of the fundamental aspects justifying microgravity research, the results of experiments already performed are reviewed and recommendations for future activities are made. Close to fifty European scientists have cooperated in the preparation of this volume and their dedicated and concerted effort is greatly appreciated.

This volume clearly demonstrates that this new branch of experimental physics merits the attention of the scientific community at large. The potential scientific and technological benefits are substantial and commercial endeavours may become viable. The latter aspect however needs to be approached with deliberation and realism, and the last chapter of this monograph puts the matter in a proper perspective. Materials are of paramount importance in high technology systems and they are, therefore, one of the key elements in ensuring the competitiveness of industrialized nations. It is mandatory for Europe to find its place in this endeavour and to follow a consistent policy.

ESA, with the full support of its member states, is presently preparing a long-term plan for its microgravity programme, "In Orbit 2000". It will address the scientific programme, programmatic aspects and hardware developments. The evolution of microgravity research will, however, depend on the active involvement of high level scientists and engineers and their continuous, painstaking efforts. Space-based science is a costly activity requiring a complex infrastructure and microgravity research is certainly no exception. It is

therefore of the utmost importance that experiments are well prepared with the support of adequate ground-based activities.

I consider this volume a milestone in the evolution of fully worthwhile European Space Station utilization and microgravity research programmes.

Ph. Goldsmith

Table of Contents

| | |
|--|----|
| CHAPTER I. The Environment of Earth-Orbiting Systems | |
| H. Hamacher, B. Fitton, J. Kingdon | 1 |
| A. Introduction | 1 |
| B. Low Gravity Simulation | 2 |
| B.1 Simulation of Weightlessness..... | 2 |
| B.2 Orbital Flight | 2 |
| B.2.1 Spacecraft in Circular Orbit | 2 |
| B.2.2 Actual Gravitational Environment Aboard a Spacecraft..... | 3 |
| B.2.3 A Case Study: The Microgravity Environment of the Orbiter/Spacelab System | 13 |
| B.3 Other Free-Fall Methods..... | 17 |
| B.3.1 Sounding Rockets | 17 |
| B.3.2 Research Aircraft | 18 |
| B.3.3 Drop Tubes and Drop Towers | 19 |
| C. Atmospheric Conditions, Radiation and High Energy Particles | 20 |
| C.1 Introduction..... | 20 |
| C.2 Radiation Environment | 22 |
| C.3 Atmospheric Environment | 26 |
| C.4 High Energy Particles | 35 |
| D. Conclusions | 45 |
| E. References | 46 |

Part I. FLUID SCIENCES

Fluid Physics

| | |
|--|----|
| CHAPTER II. Fluid Statics and Capillarity | |
| I. Martinez, J.M. Haynes, D. Langbein | 53 |
| A. Introduction | 53 |
| B. Basic Physics | 54 |
| B.1 Influence of Gravity | 54 |
| B.2 Macroscopic and Microscopic Views of the Interface | 55 |
| B.3 Thermodynamics of the Gibbs Model | 56 |

| | | |
|-----|--|----|
| B.4 | Capillary Equilibrium | 58 |
| B.5 | Capillary Stability | 61 |
| B.6 | Rotational Stability | 65 |
| B.7 | Critical Wetting | 67 |
| B.8 | Charged Interfaces | 67 |
| C. | Results of Previous Microgravity Experiments | 68 |
| C.1 | Static Equilibrium and Stability | 68 |
| C.2 | Rotation and Oscillation | 70 |
| C.3 | Critical Wetting | 74 |
| C.4 | Charged Interfaces | 75 |
| D. | Future Prospects | 77 |
| D.1 | Present Interests | 77 |
| D.2 | Topics to Be Addressed in the Future | 77 |
| D.3 | General Remarks | 78 |
| F. | References | 80 |

CHAPTER III. Fluid Dynamics

| | | |
|---|---|-----|
| J.C. Legros, A. Sanfeld, M.G. Velarde | 83 | |
| A. | Introduction | 83 |
| B. | Inertial, Internal and External Forces | 84 |
| C. | General Momentum Equation | 85 |
| C.1 | Perfect Fluids | 85 |
| C.2 | The Momentum Equation | 86 |
| C.3 | Navier-Stokes Equation | 87 |
| C.4 | Physical Meanings of Terms for Different Flows | 87 |
| C.5 | Influence of Gravity | 87 |
| C.5.1 | Hydrostatic Distribution of Pressure | 87 |
| C.5.2 | Mechanical Stability | 90 |
| C.5.3 | Stream Functions | 90 |
| C.5.4 | The Shape of a Surface | 91 |
| C.5.5 | Gravitational Waves in Perfect Fluids | 91 |
| C.5.6 | Particular Cases for Perfect Fluids | 92 |
| C.5.7 | Influence of Gravity on Viscous Fluids | 93 |
| D. | Similarity Laws | 96 |
| E. | Surface Forces and Hydrodynamical Instabilities | 99 |

Physical Chemistry

CHAPTER IV. Physical Chemistry – Overview and Selected Experiments

| | | |
|-----|--|-----|
| J. | Richter, H. Behret | 141 |
| A. | Introduction | 141 |
| B. | Elements of the Present Microgravity Research Programme | 143 |
| B.1 | Thermodynamics and Transport Properties | 143 |
| B.2 | Phase Transitions and Near-Critical Point Phenomena | 146 |
| B.3 | Wetting and Adsorption Phenomena, Nucleation and Ageing | 146 |
| B.4 | Combustion and Chemical Reactions | 147 |
| C. | Additional Perspectives | 147 |
| C.1 | Relaxation Phenomena | 147 |
| C.2 | Applied Electrochemistry and Process Engineering | 150 |
| D. | Conclusions and Outlook | 155 |
| E. | References | 156 |

| | |
|--|-----|
| CHAPTER V. Mass Transport by Diffusion | |
| Y. Malméjac, G. Frohberg | 159 |
| A. Introduction | 159 |
| B. Relevance of Microgravity | 161 |
| B.1 Advantages | 161 |
| B.1.1 Heterodiffusion..... | 161 |
| B.1.2 Self-diffusion | 163 |
| B.1.3 Thermotransport | 165 |
| B.1.4 Electrotransport | 166 |
| B.2 Problems | 169 |
| B.2.1 Macro- and Microconvection | 169 |
| B.2.2 Marangoni Convection | 170 |
| B.2.3 Free Volumes | 171 |
| B.2.4 Influence of Segregation | 172 |
| B.2.5 Wall Effects | 173 |
| B.2.6 Time-Temperature Boundary Conditions | 173 |
| B.2.7 Geometrical Boundary Conditions | 174 |
| C. Results of Experiments | 175 |
| C.1 Experimental Techniques | 175 |
| C.2 Analytical Methods | 176 |

| C.4 Diffusion Data | 186 |
| D. Analysis of Prospects | 186 |
| E. References | 188 |

CHAPTER VI. Wetting and Adsorption Phenomena

| | |
|--|-----|
| G.H. Findenegg, M.M. Telo da Gama | 191 |
| A. Introduction | 191 |
| B. Gravity Effects on Interfaces | 191 |
| B.1 Liquid-Vapour Interface | 191 |
| B.2 Wetting and Contact Angles | 194 |
| B.3 Wetting Transition | 195 |
| B.4 Critical Adsorption | 198 |
| C. Theoretical Background | 200 |
| C.1 Landau Theory | 200 |
| C.1.1 Interface Between Two Coexisting Phases..... | 201 |
| C.1.2 Wetting and Wetting Transitions | 202 |
| C.1.3 Scaling..... | 204 |
| C.1.4 Critical End Point Behaviour | 205 |
| C.2 Other Theories | 206 |
| C.2.1 Mean Field Theory for Systems with Long Ranged Interactions | 206 |
| C.2.2 Beyond Mean Field Theory | 208 |
| D. Experimental Status | 210 |
| D.1 Thickness of Wetting Layers | 211 |

| | | |
|----|-------------------------------|-----|
| E. | D.2 Critical Adsorption | 214 |
| F. | Outlook | 216 |
| | References | 217 |

CHAPTER VII. Phase Transitions and Near-Critical Phenomena

| | | |
|----|---|-----|
| D. | Beysens, J. Straub, D.J. Turner | 221 |
| A. | Introduction | 221 |
| B. | Fundamentals | 223 |
| | B.1 Thermodynamics of Phase Transitions | 223 |
| | B.2 Classical Description; Mean Field Theory | 224 |
| | B.3 Scaling Laws | 227 |
| | B.4 Fluctuations and Correlations | 229 |
| | B.5 Renormalization Group Approach | 230 |
| | B.6 Transport Properties | 231 |
| | B.7 Approach to Equilibrium | 233 |
| | B.8 Phase Separation Process, Nucleation and Spinodal Decomposition | 234 |
| | B.9 Adsorption and Wetting | 235 |
| | B.10 The λ -Point of Helium | 237 |
| | B.11 Electrolyte Solutions | 238 |
| C. | Why Microgravity? | 239 |
| | C.1 Influence of Compressibility | 239 |
| | C.2 Influence of Isochoric Expansion Coefficient | 240 |
| | C.3 The Phase Separation Process | 240 |
| | C.4 Wetting Layers | 241 |
| | C.5 Interface Stability and Capillary Waves | 242 |
| D. | Status of Experimental Investigations | 243 |
| | D.1 Specific Heat in a Liquid-Vapour Transition | 243 |
| | D.2 Phase Separation Process | 244 |
| | D.2.1 Phase Separation and Phase Mixing of Near-Critical SF ₆ | 245 |
| | D.2.2 Density Distribution Near the Critical Point in a Microgravity Environment | 246 |
| | D.2.3 Phase Separation of a Critical Mixture of Isobutyric Acid and Water | 246 |
| | D.2.4 Phase Separation of Critical and Near-Critical Mixtures of Cyclohexane-methanol and of Their Deuterated Derivatives | 247 |

| E.1 | Scientific Perspectives | 560 |
| E.2 | Materials for Applications | 561 |
| F. | References | 562 |

CHAPTER XVI. Composites

| | | |
|-------|---|-----|
| H.J. | Sprenger, J. Pötschke, C. Potard, V. Rogge | 567 |
| A. | Introduction | 567 |
| A.1 | Definition | 567 |
| A.2 | The Relevance of Microgravity to Research on Composites | 568 |
| A.3 | Applications | 569 |
| B. | In Situ Composites | 569 |
| B.1 | Eutectics..... | 569 |
| B.1.1 | Influence of Convection on the Microstructure of Unidirectionally Solidified Eutectic Alloys | 571 |

| | | |
|-------|--|-----|
| B.1.2 | Results of Microgravity Experiments | 572 |
| B.1.3 | Conclusions..... | 576 |
| B.2 | Peritectic Solidification..... | 576 |
| B.2.1 | Experimental Results | 577 |
| B.2.2 | Conclusions..... | 578 |
| B.3 | Monotectics..... | 578 |
| B.3.1 | Experimental Results | 578 |
| B.3.2 | Conclusions..... | 581 |
| C. | Artificial Composites | 581 |
| C.1 | Particle and Fibre Composites..... | 581 |
| C.1.1 | Stability of Particle Dispersions | 581 |
| C.1.2 | Experimental Results | 583 |
| C.1.3 | Conclusions..... | 586 |
| C.2 | Materials with Controlled Density | 587 |
| C.2.1 | Principles of Foam Generation | 588 |
| C.2.2 | Experimental Results | 589 |
| C.2.3 | Conclusions..... | 590 |
| D. | Discussion and Recommendations..... | 590 |
| D.1 | General Remarks | 590 |
| D.2 | Basic Research Topics | 590 |
| D.2.1 | In Situ Composites | 590 |
| D.2.2 | Artificial Composites | 591 |
| D.3 | Practical Aspects for Microgravity Experimentation | 592 |
| E. | Conclusions and Outlook | 593 |
| F. | References | 594 |

CHAPTER XVII. Glasses

| | | |
|--|--|-----|
| J. Zarzycki, G.H. Frischat, D.M. Herlach | 599 | |
| A. | Introduction | 599 |
| B. | Glass Formation | 600 |
| B.1 | Introduction | 600 |
| B.1.2 | Nucleation | 600 |
| B.1.3 | Crystal Growth..... | 603 |
| B.1.4 | Temperature-Time Transformation Diagrams..... | 604 |
| C. | Glass-Forming Systems | 606 |
| C.1 | Nonmetallic Systems | 606 |
| C.2 | Metallic Systems | 607 |
| C.3 | Microgravity Aspects..... | 608 |
| C.3.1 | Nucleation Studies and Formation of Metallic Glasses | 608 |
| C.3.2 | Preparation of Nonmetallic Glasses | 609 |
| D. | Experimental Facilities..... | 610 |
| D.1 | Required Facilities | 610 |
| D.2 | Available Facilities | 610 |
| D.2.1 | Conventional Systems | 611 |
| D.2.2 | Levitation Systems | 611 |

| | | |
|-------|---|-----|
| E. | Review of Achievements to Date | 619 |
| E.1 | Metallic Systems | 619 |
| E.1.1 | Nucleation Studies on Earth | 619 |
| E.1.2 | Microgravity Experiments..... | 622 |
| E.2 | Nonmetallic Systems | 623 |
| E.2.1 | Ground-Based Investigations..... | 623 |
| E.2.2 | Flight Experiments | 623 |
| F. | Conclusions and Recommendations..... | 632 |
| G. | References | 634 |

Analysis of the Limitations of Microgravity and Applications

CHAPTER XVIII. Influence of Residual Accelerations on Fluid Physics and Materials Science Experiments

| | | |
|--|--|-----|
| R. Monti, D. Langbein, J.J. Favier | 637 | |
| A. | Introduction | 637 |
| B. | General Considerations on g-Tolerability | 640 |
| B.1 | Definition of Tolerable g -Levels | 640 |
| B.2 | Objectives of the g -Tolerability Analysis | 642 |
| B.3 | The Set of Relevant Equations | 643 |
| B.4 | Order of Magnitude Analysis (OMA) | 645 |
| B.5 | Application of OMA to g -Level Tolerability Problems..... | 647 |
| C. | Review of Past Activities in Fluid Science | 648 |
| C.1 | Thermo-Fluid-Dynamic and Sedimentation Phenomena..... | 649 |
| C.2 | Liquid Specimen Response to g -Level Disturbances | 651 |
| D. | Analysis of Specific Problems | 654 |
| D.1 | Crystal Growth from the Melt | 654 |
| D.1.1 | Description of the Problem | 655 |
| D.1.2 | Fluid Dynamics Modelling: Steady-State Conditions .. | 656 |
| D.1.3 | Segregation Behaviour | 658 |
| D.1.4 | TFD Modelling in Non-Steady-State Conditions: g -Jitter | 662 |
| D.1.5 | Segregation Behaviour as a Result of g -Jitter | 663 |
| D.2 | Growth from Solutions | 666 |
| D.2.1 | Growth at Low Peclet Numbers | 667 |
| D.2.2 | Growth Anisotropy in a Gravity Field | 667 |
| D.2.3 | Solutal Instabilities | 668 |
| D.3 | Oscillations of Liquid Columns | 668 |
| D.3.1 | Stability and Breakage | 668 |
| D.3.2 | Resonance Frequencies | 669 |
| D.3.3 | Reduction of the Tolerable g -Levels by Resonant Modes | 671 |

| | | |
|-------|---|-----|
| D.4 | Diffusion and Thermodiffusion Experiments | 672 |
| D.4.1 | Description of the Problem | 672 |
| D.4.2 | Self- and Interdiffusion..... | 673 |
| D.4.3 | Thermodiffusion | 675 |
| E. | Conclusions and Recommendations..... | 677 |
| F. | References | 678 |

CHAPTER XIX. Industrial Potential of Microgravity

| | | |
|-------|--|------------|
| H.U. | Walter, C. Belouet, Y. Malméjac | 681 |
| A. | Introduction | 681 |
| B. | Present Status..... | 682 |
| B.1 | U.S.A. | 682 |
| B.2 | U.S.S.R. | 686 |
| B.3 | Japan..... | 689 |
| B.4 | Europe..... | 691 |
| B.4.1 | Germany | 694 |
| B.4.2 | France..... | 695 |
| B.4.3 | Other European Countries | 696 |
| C. | Potential of Materials Processing in Space..... | 697 |
| C.1 | Introduction | 697 |
| C.2 | Economic Considerations..... | 697 |
| C.3 | Glasses | 698 |
| C.4 | Crystal Growth from the Melt..... | 699 |
| C.5 | Crystal Growth from the Vapour Phase | 700 |
| C.6 | Crystallization of Inorganic Materials from Solutions..... | 701 |
| C.7 | Protein Crystallization | 702 |
| C.8 | Microgravity-Adapted Processes..... | 702 |
| D. | Discussion | 703 |
| E. | Recommendations for a European Policy | 705 |
| F. | References | 730 |
| | Subject Index | 731 |
| | Index of Contributors | 745 |
