*** significant at 1%. ^a Technology adoption rate at sub-location level used as instrument. ^b Farmer's awareness of improved maize varieties used as instrument. ^c Proportion of land with slopes at farm level used as instrument. ^d Received extension on soil and water management practices used as instrument. ^e The parameter athrho represents the inverse hyperbolic tangent of the correlation between the error terms in the selection and outcome equations. A significant athrho indicates that the null hypothesis of "no hidden bias" has to be rejected. An insignificant athrho indicates that the null hypothesis cannot be rejected.
