

Supplementary Fig 1. **Western blot analyses to verify immuno-specificity of affinity purified anti-JPO2 antibodies.** UW228 expressing FLAG-JPO2, and parental UW228 cells were infected with vector (PLKO), or lentivirus containing a JPO2 specific RNAi. Prepared nuclear lysates were immunoblotted with anti-JPO2 or anti-actin antibodies. Arrows indicate the position of exogenous FLAG-JPO2 and endogenous JPO2 protein.
