

### Supplemental figure legends

#### **Supplemental Figure 1. Antigen-specific CD8<sup>+</sup> T cell generation is enhanced by co-administration with GITRL.**

BALB/c mice were immunized twice at two week intervals with plasmids encoding HER2 with or without co-administration of plasmids encoding mouse GITRL as indicated. CD8<sup>+</sup> T cells were obtained from spleens one week after the second immunization and specific T cell induction was analyzed by ELISPOT assays. Target cells were mERK2<sub>136-144</sub>-9m-pulsed P1.HTR (black bars) or HER2 p63-71 (T)-pulsed P1.HTR (open bars). Data are mean  $\pm$ SD. \*\* $p < 0.05$ .
