Preface	xxix
Part I: Networks, Relations, and Structure	1
1 Social Network Analysis in the Social and Behavioral Sciences	3
1.1 The Social Networks Perspective	4
1.2 Historical and Theoretical Foundations	10
1.2.1 Empirical Motivations	11
1.2.2 Theoretical Motivations	13
1.2.3 Mathematical Motivations	15
1.2.4 In Summary	16
1.3 Fundamental Concepts in Network Analysis	17
1.4 Distinctive Features	21
1.5 Organization of the Book and How to Read It	22
1.5.1 Complexity	23
1.5.2 Descriptive and Statistical Methods	23
1.5.3 Theory Driven Methods	24
1.5.4 Chronology	24
1.5.5 Levels of Analysis	25
1.5.6 Chapter Prerequisites	26
1.6 Summary	27
2 Social Network Data	28
2.1 Introduction: What Are Network Data?	28
2.1.1 Structural and Composition Variables	29

X	Contents
X	Contents

2.1.2 Modes	29
2.1.3 Affiliation Variables	30
2.2 Boundary Specification and Sampling	30
2.2.1 What Is Your Population?	31
2.2.2 Sampling	33
2.3 Types of Networks	35
2.3.1 One-Mode Networks	36
2.3.2 Two-Mode Networks	39
2.3.3 Ego-centered and Special Dyadic Networks	41
2.4 Network Data, Measurement and Collection	43
2.4.1 Measurement	43
2.4.2 Collection	45
2.4.3 Longitudinal Data Collection	55
2.4.4 Measurement Validity, Reliability, Accuracy, Error	56
2.5 Data Sets Found in These Pages	59
2.5.1 Krackhardt's High-tech Managers	60
2.5.2 Padgett's Florentine Families	61
2.5.3 Freeman's EIES Network	62
2.5.4 Countries Trade Data	64
2.5.5 Galaskiewicz's CEOs and Clubs Network	65
2.5.6 Other Data	66
Part II: Mathematical Representations of Social Networks	67
3 Notation for Social Network Data	69
3.1 Graph Theoretic Notation	71
3.1.1 A Single Relation	71
3.1.2 OMultiple Relations	73
3.1.3 Summary	75
3.2 Sociometric Notation	77
3.2.1 Single Relation	79
3.2.2 Multiple Relations	81
3.2.3 Summary	83
3.3 OAlgebraic Notation	84
3.4 OTwo Sets of Actors	85
3.4.1 \(\times\)Different Types of Pairs	86
3.4.2 Sociometric Notation	87
3.5 Putting It All Together	20

		Conter	nts	xi
4	Grai	nhs and	l Matrices	92
•		•	Graphs?	93
		Graph	-	94
		_	Subgraphs, Dyads, and Triads	97
			Nodal Degree	100
		4.2.3	Density of Graphs and Subgraphs	101
		4.2.4	Example: Padgett's Florentine Families	103
		4.2.5	Walks, Trails, and Paths	105
		4.2.6	Connected Graphs and Components	109
		4.2.7	Geodesics, Distance, and Diameter	110
		4.2.8	Connectivity of Graphs	112
		4.2.9	Isomorphic Graphs and Subgraphs	117
		4.2.10	OSpecial Kinds of Graphs	119
	4.3	Direct	ed Graphs	121
		4.3.1	Subgraphs - Dyads	124
			Nodal Indegree and Outdegree	125
		4.3.3	Density of a Directed Graph	129
		4.3.4	An Example	129
			Directed Walks, Paths, Semipaths	129
			Reachability and Connectivity in Digraphs	132
			Geodesics, Distance and Diameter	134
			OSpecial Kinds of Directed Graphs	134
			Summary	136
	4.4	-	d Graphs and Signed Directed Graphs	136
			Signed Graph	137
			Signed Directed Graphs	138
	4.5		d Graphs and Valued Directed Graphs	140
			Nodes and Dyads	142
			Density in a Valued Graph	143
			Paths in Valued Graphs	143
		Multig		145
			pergraphs	146
	4.8	Relati		148
			Definition	148
			Properties of Relations	149
	4.9	Matri		150
			Matrices for Graphs	150
			Matrices for Digraphs	152
			Matrices for Valued Graphs	153
		4.9.4	Matrices for Two-Mode Networks	154

xii	Contents	
	4.9.5 Matrices for Hypergraphs	154
	4.9.6 Basic Matrix Operations	154
	4.9.7 Computing Simple Network Properties	159
	4.9.8 Summary	164
4.10	Properties	164
	4.10.1 Reflexivity	164
	4.10.2 Symmetry	165
	4.10.3 Transitivity	165
4.11	Summary	165
Part I	II: Structural and Locational Properties	167
5 Cen	trality and Prestige	169
5.1	Prominence: Centrality and Prestige	172
	5.1.1 Actor Centrality	173
	5.1.2 Actor Prestige	174
	5.1.3 Group Centralization and Group Prestige	175
5.2	Nondirectional Relations	177
	5.2.1 Degree Centrality	178
	5.2.2 Closeness Centrality	183
	5.2.3 Betweenness Centrality	188
	5.2.4 SInformation Centrality	192
5.3	Directional Relations	198
	5.3.1 Centrality	199
	5.3.2 Prestige	202
5.4	5.3.3 A Different Example	210
5.4	Comparisons and Extensions	215
6 Stru	ictural Balance and Transitivity	220
6.1	Structural Balance	222
	6.1.1 Signed Nondirectional Relations	223
	6.1.2 Signed Directional Relations	228
	6.1.3 Checking for Balance	230
	6.1.4 An Index for Balance	232
	6.1.5 Summary	232
6.2	Clusterability	233
	6.2.1 The Clustering Theorems	235
	6.2.2 Summary	238
6.3	Generalizations of Clusterability	239

		Contents	xiii
		6.3.1 Empirical Evidence	239
		6.3.2 ORanked Clusterability	240
		6.3.3 Summary	242
	6.4	Transitivity	243
	6.5	Conclusion	247
7	Coh	esive Subgroups	249
	7.1	Background	250
		7.1.1 Social Group and Subgroup	250
		7.1.2 Notation	252
	7.2	Subgroups Based on Complete Mutuality	253
		7.2.1 Definition of a Clique	254
		7.2.2 An Example	254
		7.2.3 Considerations	256
	7.3	Reachability and Diameter	257
		7.3.1 <i>n</i> -cliques	258
		7.3.2 An Example	259
		7.3.3 Considerations	260
		7.3.4 <i>n</i> -clans and <i>n</i> -clubs	260
		7.3.5 Summary	262
	7.4	Subgroups Based on Nodal Degree	263
		7.4.1 <i>k</i> -plexes	265
		7.4.2 <i>k</i> -cores	266
	7.5	Comparing Within to Outside Subgroup Ties	267
		7.5.1 LS Sets	268
		7.5.2 Lambda Sets	269
		Measures of Subgroup Cohesion	270
	7.7	Directional Relations	273
		7.7.1 Cliques Based on Reciprocated Ties	273
		7.7.2 Connectivity in Directional Relations	274
		7.7.3 n-cliques in Directional Relations	275
	7.8	Valued Relations	277
		7.8.1 Cliques, <i>n</i> -cliques, and <i>k</i> -plexes	278
		7.8.2 Other Approaches for Valued Relations	282
	7.9	Interpretation of Cohesive Subgroups	283
	7.10	Other Approaches	284
		7.10.1 Matrix Permutation Approaches	284
		7.10.2 Multidimensional Scaling	287
		7.10.3 OFactor Analysis	290
	7.11	Summary	290

	~
X1V	Contents

8 Affiliations and Overlapping Subgroups	291
8.1 Affiliation Networks	291
8.2 Background	292
8.2.1 Theory	292
8.2.2 Concepts	294
8.2.3 Applications and Rationale	295
8.3 Representing Affiliation Networks	298
8.3.1 The Affiliation Network Matrix	298
8.3.2 Bipartite Graph	299
8.3.3 Hypergraph	303
8.3.4 Osimplices and Simplicial Complexes	306
8.3.5 Summary	306
8.3.6 An example: Galaskiewicz's CEOs and Club	s 307
8.4 One-mode Networks	307
8.4.1 Definition	307
8.4.2 Examples	309
8.5 Properties of Affiliation Networks	312
8.5.1 Properties of Actors and Events	312
8.5.2 Properties of One-mode Networks	314
8.5.3 Taking Account of Subgroup Size	322
8.5.4 Interpretation	324
8.6 ⊗Analysis of Actors and Events	326
8.6.1 ⊗Galois Lattices	326
8.6.2 ⊗Correspondence Analysis	334
8.7 Summary	342
Part IV: Roles and Positions	345
9 Structural Equivalence	347
9.1 Background	348
9.1.1 Social Roles and Positions	348
9.1.2 An Overview of Positional and Role Analysi	s 351
9.1.3 A Brief History	354
9.2 Definition of Structural Equivalence	356
9.2.1 Definition	356
9.2.2 An Example	357
9.2.3 Some Issues in Defining Structural Equivale	nce 359
9.3 Positional Analysis	361
9.3.1 Simplification of Multirelational Networks	361

Contents	/X
