

Supplementary Fig 1. Presence of aberrant mitotic figures in engrafted OVA1X tumors were analyzed by co-immunostaining with anti-H3S10ph (green staining), anti- α -tubulin (red staining). Chromosomes were labeled with DAPI in the blue channel. Treatment doses were: i) lurbinectedin (0.18 mg/kg); ii) cisplatin (3.5 mg/kg); and, iii) lurbinectedin plus cisplatin (0.18+3.5 mg/kg). Scale bar is 10 μ m.
